

ePages for SAP Business One

data sheet

***e*.pages**  | **core**systems

Proceed professionally.

Linking an ePages rental shop to your SAP Business One.

The acquisition of new customer bases; an increase in sales with a long-term reduction in your costs; the allocation of fewer sales and order processing resources... There are many arguments in favour of creating an online shop featuring integration with SAP Business One.

ePages enables you — even without programming experience — to administer as per your needs an online shop for the online selling of products and services. coresystems' coresuite eCommerce ensures the safe data exchange between ERP and online shop.

In addition, coresystems offers a service bundle for customising the interface, and ePages will gladly help you with the creation of your online shop.

This data sheet will provide a detailed overview of the various products' scopes. For more information, please read the descriptions on the following pages:

Detailed overview of products: "ePages for Business One"	3
